

Arian Debeljak, M. Sc. is Head of IT (CIO) at City Municipality of Ljubljana (MOL). He completed his postgraduate studies at the University of Ljubljana, Faculty of Economics (Information Management), with an M. Sc. thesis entitled 'IT Asset Management'. As a CIO, he is responsible for the management, development and organisation of work in the IT department, as well as for the strategic development in the area of digitalization of the municipality, which must be aligned with the business strategy of MOL. Prior to his current position, he worked at various IT companies (ICOS, Hermes plus, Skupina Atlantis, S&T Slovenija, Hewlett-Packard) as a programmer, technical software and sales consultant, and account and project manager. He has gained a lot of experience with various IT solutions, especially Business Software (Business Intelligence, System

& Service & Asset Management, Service Automation, CRM, DMS etc.). As part of his PhD, he is researching various taxonomic models of digital transformation (DT), relations and interdependencies between individual DT building blocks, and the applicability of digital maturity models, with a focus on local communities.
