

As a university graduate mechanical engineer in the field of cybernetics, automation and robotics, I am extremely familiar and experienced with the technologies of Industry 4.0 and implementing them in the new product and services and have had the opportunity to practice my profession for more than 25 years. By working with different companies and research centres in Europe, I have gained knowledge about digital technologies, especially technologies of data acquisition, data exchange between heterogeneous systems and technology fusion. I combine knowledge of IoT (Internet of Things), analytics, cloud services and the development of user demand to develop new products, services and business models and to promote mental leap that environment adapt to social and technological changes. I coach different target groups in the area of "Business Model", "Base Board", "Digital transformation" and "Art&Design Thinking" methodologies. Today, i work in Municipality of Nova Gorica as head of municipality development office and i am also responsible for project European Capital of Europe.
