

**Melissa Campagno** is an innovation consultant and project manager at G.A.C. Group providing strategic advice in R&D and innovation policies coordinating collaborative EU innovation projects. She is coordinating several innovation collaborative projects from the Horizon 2020 and Horizon Europe programmes including the PROTECT project. The PROTECT project supports urgent action for climate change adaptation and mitigation, enabling public authorities to use state-of-the-art public procurement approaches to identify solutions – climate services based on Earth Observation – that best fit the specific and systemic needs of the public demand. PROTECT creates and prepares groups of public buyers willing to take part in a 19M EUR Pre-commercial procurement (PCP) call that will be fully funded by the EC and that will open on 17 October, 2023. Prior to joining G.A.C., Melissa worked as a senior consultant within the PwC Luxembourg's public sector practice where she advised EU institutions, notably the EIB and the European Commission on their public procurement policies, and supported the implementation of such policies through various projects. She notably developed the European Competency Framework for Public Procurement Professionals for the DG GROW of the European Commission, and the e-library of public procurement good practices in ESI Funds for the DG REGIO.
