

Mr. Evald Kranjčevič gained his first experience in the field of industrial automation and process engineering. As part of his work at the "Jožef Stefan" Institute, also as the author of many professional and scientific articles, he dealt primarily with the field of energy efficiency and environmental issues, especially in connection with the reduction of greenhouse gas emissions. In the following years, he worked in the field of development and implementation of energy solutions, in the public and private sector, in the region of SE Europe. Today, as managing director of Envirodual company, he deals with strategic energy studies and related modelling, in the light of the sustainable transition of energy sector and society.
