

Dr. Vida Groznik is an Assistant Professor in Computer Science, specializing in the integration of artificial intelligence into medical applications. Her extensive research focuses on the critical intersection of AI and healthcare, particularly in the early detection of neurological disorders like dementia. She works as a research associate and a guest lecturer at the University of Ljubljana, Faculty of Computer and Information Science.

In addition to her academic role, Dr. Groznik is the Co-founder and CEO of NEUS Diagnostic, a startup dedicated to leveraging AI and advanced IT technologies for the early diagnosis of neurological disorders.

With a commitment to bridging the gap between academia and practical applications, Dr. Groznik contributes to the ongoing dialogue at the forefront of AI in medicine. Her academic background includes degrees from University of Ljubljana, and she has a track record of impactful publications in her field.
